Rankoya JVZoo Launch: Funnel and Credit Specification

Oct 28, 2026 · @Jai

1. Funnel overview

Rankoya is sold through two flows: a $27 front end that climbs to Autopilot and Whitelabel, and a $297 Bundle that climbs to a $127 Mega Bundle. Nothing in the product is unlimited. Every action that calls an API spends credits, and every offer carries credits in the same ratio of about 9.26 credits per dollar (250 credits for $27).

Offer	Price	Credits included	Role in the funnel
Front End: Rankoya Core	$27	250	Entry offer: every tool, limited by credits. Bonus: lifetime free hosting
Order bump: Credit Pack S	$27	+500	Optional add-on on the front-end order form
OTO1: Autopilot Agent	$67	+620	Hands-off publishing and fixes
OTO2: Whitelabel	$297	2,750 (shared pool)	Resell Rankoya under the buyer's own brand
Bundle	$297	2,750	Front End + Autopilot + Whitelabel Lite
Mega Bundle	$127	1,500	Extra credits plus bonus items (see section 7)

Front-end plans. The front-end page offers two plans: Rankoya Core at $27 (1 site, 250 credits) and Rankoya Commercial at $97 (10 sites, 900 credits, commercial licence so the buyer can add client websites and charge for the work). Everything else in the funnel is the same for both plans.

Flow 1: direct Bundle path

1. Bundle, $297
2. Mega Bundle, $127 (the funnel ends after this)

Flow 2: main offer path

1. Front End, $27, with an optional Credit Pack S order bump, $27

2. OTO1: Autopilot Agent, $67
3. OTO2: Whitelabel, $297 (the funnel ends after this)

A buyer who takes everything in Flow 2 pays $391 and receives 3,620 credits. A buyer who takes Flow 1 pays $424 and receives 4,250 credits.

2. Credit system (rules for the developer)

Every paid action costs credits, and no feature may cost us more than $0.006 per credit. That cap is what keeps API cost near 16% of what we keep on each sale. The credit costs below are estimates and must be replaced with measured costs from the free-trial test before launch.

Rules

1. Credits charged for an action = API cost of that action divided by $0.006, rounded up. A $0.012 keyword-suggestion call is 2 credits.
2. Use Live mode for anything the user is waiting on. Use the cheaper Standard queue only for background jobs the user does not watch, such as weekly rescans.
3. Show the credit cost before the user runs an action, and show the remaining balance on every page.
4. Warn the user when balance drops to 25% of what they were given, and offer a credit pack at that point.
5. Do not charge credits for failed or empty API calls.
6. Autopilot has a daily credit cap, so a setup mistake cannot burn a whole balance overnight.
7. Credits do not expire. Credits are not refundable once spent.
8. Keep the DataForSEO balance topped up. Minimum top-up is $50. Set a low-balance alert or auto-recharge so paying users never see errors.

Credit table (estimates to verify)

Action	Estimated API cost	Credits
Add site: auto-analysis, audience, core topics	about $0.03	5
Rank check, Live mode	$0.002 per keyword	1 per 3 keywords
Rank check, Standard queue (background only)	$0.0006 per keyword	1 per 10 keywords
Keyword lookup (volume)	from $0.0012	1

Action	Estimated API cost	Credits
Keyword suggestions	$0.012 + $0.00012 per item	2 (up to 25 items), 4 (up to 100 items)
Competitor discovery	about $0.03	5
Content gap analysis	about $0.03	5
Keyword research summary	about $0.03	5
Site audit crawl	from $0.00015 per page	1 per 40 pages
AI visibility check: one question, one engine	to be measured (about $0.02 assumed)	4
Article draft, about 1,500 words	about $0.10 assumed	20
Edit or rewrite an article with AI	about $0.03 assumed	5
Authority prospect finder	to be measured	to be set
Free SEO tools (title checker, broken links)	negligible	0, rate-limited

A typical first session (setup, rankings, keywords, 5 AI questions on 4 engines, competitors, gaps, audit, one keyword research, one article) uses about 134 credits. The 250 credits in the front end cover that session and leave about 115 for further work.

Free-trial test before launch

Run one real scan on ChatGPT, Claude, Gemini and Perplexity and record the actual cost per engine, including the charge from the LLM itself. Then finalise the credit table above.

Free-account protection (if a free plan is kept)

- Google login only for free accounts.
- One account per website domain. Block a domain already added in any account.
- Track IP address and block or flag several free accounts from one IP.
- Add browser fingerprinting (for example FingerprintJS) to catch one device making new accounts.
- A daily limit on free credits across all users, so the balance cannot be drained in one day.

3. Front End: Rankoya Core ($27, 250 credits)

The front end gives the buyer every measuring, planning and writing tool. It is limited by credits, not by feature locks, so a buyer can try each feature at least once. It includes 250 credits, enough for one full first session with credits left over. Sites: 1 site, for the buyer's own use.

Setup and onboarding

- Add a website by domain, country and language.
- Automatic site analysis: core business, target audience and characteristics, which the user confirms or edits.
- Google connect (Search Console and Analytics, read-only) with property picker.
- AI-generated core topics for the site; the user selects which to keep.
- A content plan is built automatically at setup, with a choice of "publish automatically" or "ask me first".
- App available in English, Spanish, French, German, Portuguese, Arabic, Chinese and Japanese.

AI visibility

- AI-generated customer questions for the user's product.
- Check any question on ChatGPT, Claude, Gemini and Perplexity.
- Mentioned or not, per question and per engine, with the full answer text and the brands named in order.
- Visibility percentage and a single AI visibility score per brand, with a per-platform trend.
- Google AI Overviews and Google Maps tracking.
- Share of voice against competitors the user names, shown as a 12-week trend.

Rankings and keywords

- Search Console data: average position, impressions, clicks and keyword positions.
- Daily position tracking by keyword and device, with rank distribution and weekly wins and losses.
- Add keywords manually, and keep accepted and rejected keyword lists.
- Keyword research: lookup, suggestions and a "Research" summary for any keyword.

Competitors

- Competitor discovery: pick keywords and Rankoya finds competitors in that niche.
- Content gap analysis: topics competitors rank for that none of the user's pages target.
- Research any gap, then write an article for it. Research history is kept.

Content

- "Write article" button: Rankoya researches what ranks for the keyword, then drafts the article.
- Each draft has headings, internal links, external links, and meta title and description. The user can edit before publishing.
- Content calendar with planned articles. Publish now or schedule a date.
- Publishing to WordPress.com, self-hosted WordPress, Shopify, Webflow, Ghost, Wix and Next.js, or copy and paste anywhere.

Site audit

- Crawls the site and rates issues critical, warning or notice, with a site health score.
- Detects broken internal links, missing meta descriptions, missing canonical URLs, oversized images and skipped heading levels.
- Plain-language fix guidance, with the exact text to paste in.
- "Verify fix" button, and automatic re-crawls to confirm.

Authority

- Authority page: enter a competitor domain and find sites that could reference the user's site.

Approvals

- Approval cards for every proposed change: approve, edit or reject, in the app or on Telegram.
- Autopilot is not included here. The front end runs in "Ask me first" mode only.

Free SEO tools (no credits, rate-limited): page title and description checker, broken links checker, keyword checks.

Bonus: Lifetime Free Hosting

The front-end buyer also receives lifetime free hosting as a bonus. This appears to be the Zero Dollar Bill Method, which the last launch's Mega Bundle page lists as item 10 (free lifetime hosting for unlimited websites). If the front end carries it, remove it from the Mega Bundle list so it is not given twice.

Order bump on the front-end order form: Credit Pack S, +500 credits for $27 (see section 8).

Front End plan 2: Rankoya Commercial ($97, 900 credits)

The front-end page offers a second plan for buyers who want to earn money with Rankoya. It has every feature listed above, plus:

- Up to 10 websites in one account (the $27 plan has 1).

- Commercial licence: the buyer can add client websites and charge for the work.
- 900 credits, the same credit ratio as the rest of the funnel, shared across all 10 sites.
- The lifetime free hosting bonus and the Credit Pack S order bump apply to both plans.
- Autopilot (OTO1) is offered to buyers of either plan.

4. OTO1: Autopilot Agent ($67, +620 credits)

Autopilot turns Rankoya from a tool the buyer operates into an agent that works for them. It is offered to front-end buyers on the upsell page and adds 620 credits to their balance. Price test: $47 if conversion is low.

Autopilot modes

- **Ask me first:** every change waits in the approval queue (this is the front-end behaviour).
- **Auto-publish content:** approved-by-rule articles are published on their scheduled date without a click.
- **Full autopilot:** Rankoya finds gaps, drafts, publishes and applies fixes on its own, within the daily credit cap.

Agent features

- Ask Rankoya chat: "Why did we drop for this keyword?" returns an explanation and a proposed fix as an approval card.
- Fix queue where every task is tagged "Rankoya does this" or "You do this".
- Calendar auto-scheduling: Rankoya fills the content calendar from keyword gaps and what ranks now, then publishes on schedule.
- Automatic on-page fixes on WordPress: titles, meta descriptions and heading fixes applied after approval or under autopilot.
- Weekly automatic rescans of rankings, AI visibility and the site audit, run on the Standard queue to save credits.
- Full conversation continues on Telegram: updates, approvals, edits and questions from a phone.
- Credit use report: what autopilot spent this week, by action.

Credit rules for this upsell

- 620 credits are added to the balance on purchase.
- Daily credit cap on autopilot, set by default 40 credits a day and editable by the user.
- When balance reaches 25%, autopilot pauses publishing and prompts for a credit pack.
- Autopilot never spends credits on a failed or empty call.

5. OTO2: Whitelabel ($297, 2,750 pool credits)

Whitelabel lets the buyer sell Rankoya to their own clients under their own brand. It is a one-time licence and carries a shared pool of 2,750 credits. Price floor: $197, but at that price the same API exposure earns much less.

Branding and reseller console

- Own domain, logo and colour scheme across the app.
- Own pricing: the buyer sets what their clients pay.
- Support handled behind the buyer's brand.
- Licence covers 100 client accounts (the Whitelabel Lite in the Bundle covers 25).

Agency features

- Several brands per workspace, each with its own site, keywords and AI visibility.
- Team collaboration with member roles.
- Client-ready reports that clients can read without the agency in the room.
- Agency resource kit: proposal templates, audit report templates, outreach scripts and pricing sheets.
- Client accounts receive the front-end feature set. Clients cannot use Autopilot.

Credit rules for this upsell

- 2,750 credits form one shared pool for the buyer and all their client accounts.
- Each new client account gets a small trial allowance from the pool (default 50 credits, editable by the buyer).
- Hard stop: a client account cannot draw more than its allowance. This stops one client from using the whole pool.
- When the pool runs low, the reseller buys credit packs at wholesale price and resells them at their own price. These packs are a repeat revenue source for us (see section 8).

Credit add-on on the Whitelabel order form: Credit Pack XL, +5,000 credits for $197 (see section 8).

6. Bundle ($297, 2,750 credits)

The Bundle gives the front end, Autopilot and a smaller Whitelabel licence in one purchase, at $297. Bought separately, comparable items cost about $461 (Commercial front end $97, Autopilot $67, Whitelabel $297), so the Bundle is a real saving.

Included	What the buyer gets	Credits
Front End: Rankoya Commercial	Everything in section 3 as the Commercial plan (10 sites, commercial licence), including lifetime free hosting	900
OTO1: Autopilot Agent	Everything in section 4	620
Whitelabel Lite	Branding and agency features from section 5, with 25 client licences (the full Whitelabel has 100)	1,230 (shared pool)
Total		**2,750**

- The Whitelabel Lite pool (1,230) is smaller than the full Whitelabel pool (2,750) so the standalone Whitelabel stays worth buying.
- The Bundle is sold on its own page and is the first step of Flow 1.
- **Credit add-on on the Bundle order form:** Credit Pack L, +3,000 credits for $127 (see section 8).
- The Mega Bundle ($127) is the only upsell after the Bundle.

7. Mega Bundle ($127, 1,500 credits)

The Mega Bundle is the last step of Flow 1, offered right after the Bundle. It reuses the Mega Bundle page from the last launch (15 traffic and training items, listed below) and adds 1,500 credits, for $127.

What the Mega Bundle contains

- **1,500 extra credits.** The same ratio as the rest of the funnel would give 1,175 credits for $127. We add 325 more as a sweetener, which raises API cost to about 20% of what we keep on this sale (against 16% elsewhere).
- **Last launch's Mega Bundle contents** (LiveStreamSalesAgentsAI Mega Bundle): the 15 traffic and training items listed below, taken from livestreamingsalesagentsai.com/megabundle.
- **Any free traffic app** Jai chooses to add as a bonus: none added; the 15 items below already include the traffic tools.

The 15 items (from livestreamingsalesagentsai.com/megabundle)

1. Instagram Lead Extractor Pro
2. TikTok Lead Extractor Pro
3. LinkedIn Lead Extractor Pro

4. Facebook Lead Extractor Pro
5. Google Maps Lead Extractor Pro
6. Twitter Lead Extractor Pro
7. CleanMailList: AI email list cleaner
8. ProMails: AI email rewriter for deliverability
9. Premium Stock Vault: 10,000,000+ royalty-free 4K stock videos
10. Zero Dollar Bill Method: free lifetime hosting for unlimited websites
11. Reddit blueprint: getting a brand cited in AI answers, and free traffic
12. Training: 0 to 100,000 clicks a month
13. Training: Facebook, Instagram and YouTube ads strategy
14. Training: starting a six-figure agency service (live)
15. Complete step-by-step video tutorials, with VIP Facebook group access and 5-year premium support

The existing page shows a 30-day guarantee, a limit of 50 buyers and a displayed price of $2997, which looks like a typo. Our Mega Bundle price is $127. Do not reuse claims such as "guarantees 99.9% inboxing" or "millions of verified leads" on the new page without proof.

Rules

- Offered only to Bundle buyers, one time.
- Credits are added to the same balance as the Bundle credits.
- After the Bundle (2,750) plus Mega Bundle (1,500), the buyer holds 4,250 credits.

8. Credit packs and add-ons

Credit packs let buyers keep using Rankoya after the included credits run out, without us offering anything unlimited. Packs sold through JVZoo pay affiliate commission, so they are priced higher per credit than packs sold inside the app.

Pack	Credits	Price	Where it is offered	Max API cost	We keep (35%)	Cost share
Credit Pack S	500	$27	Order bump on the front-end order form	$3.00	$9.45	32%
Credit Pack M	1,500	$67	Downsell or in-app, after a buyer declines an upsell	$9.00	$23.45	38%
Credit Pack L	3,000	$127	Add-on on the Bundle order form	$18.00	$44.45	40%

Credit Pack XL, Whitelabel order form: 5,000 credits for $197. Maximum API cost $30.00, we keep $68.95 (35%), cost share 44%. Whitelabel buyers use credits fastest because the pool is shared across all their client accounts.

In-app packs (no affiliate commission). Inside the app, price packs at about 3 to 5 times our cost, which is $0.02 to $0.03 per credit. A 1,000-credit pack would be $20 to $30. Resellers (Whitelabel) buy these at wholesale and resell at their own price.

Pricing logic. The cost share is the maximum API cost divided by what we keep after commission, assuming every credit is spent. The packs have a higher cost share than the main offers because they carry no product value, so do not discount them further.

9. Economics

Across the funnel the worst-case API cost stays between 16% and 20% of what we keep on each sale. This assumes the affiliate takes 60% and platform fees take about 5%, so we keep about 35%, and that every credit is spent at the $0.006 cap.

Offer	Price	Credits	Max API cost	We keep (35%)	Cost share
Front End	$27	250	$1.50	$9.45	16%
OTO1: Autopilot	$67	620	$3.72	$23.45	16%
OTO2: Whitelabel	$297	2,750	$16.50	$103.95	16%
Bundle	$297	2,750	$16.50	$103.95	16%
Mega Bundle	$127	1,500	$9.00	$44.45	20%
Flow 2 total (FE + OTO1 + OTO2)	**$391**	**3,620**	**$21.72**	**$136.85**	**16%**
Flow 1 total (Bundle + Mega)	**$424**	**4,250**	**$25.50**	**$148.40**	**17%**

Front End Commercial ($97, 900 credits): maximum API cost $5.40, we keep $33.95 (35%), cost share 16%. The Flow 2 total above uses the $27 plan.

Example per-sale profit after API cost. A $27 front-end sale leaves $9.45 - $1.50 = $7.95. Split between two partners that is about $3.98 each.

Assumptions to verify

- Commission: last launch paid 70% on the front end and 60% on everything else. If the front end pays 70%, we keep about 25% of $27 and the cost share rises, so recheck the 250-credit decision.
- Refunds: the typical refund rate in this market is about 12%. Credits already spent cannot be recovered.
- Most buyers will not spend every credit, so real API cost will be lower than the worst case shown.

- All credit costs come from estimates until the free-trial test is done (section 2).

10. Developer checklist and open items

Build checklist

- [ ] Credit ledger per account, with a shared pool and a per-client allowance for Whitelabel.
- [ ] Editable cost-per-action table. Credits charged = API cost divided by $0.006, rounded up.
- [ ] Route Live mode to user-waiting actions and Standard queue to background jobs.
- [ ] Show cost before each action, show balance everywhere, warn at 25% remaining.
- [ ] Daily credit cap on Autopilot, and pause publishing at 25% balance.
- [ ] JVZoo product mapping: credit grants for Front End (250), Autopilot (620), Whitelabel (2,750), Bundle (2,750), Mega Bundle (1,500) and each credit pack.
- [ ] Handle upgrades without double-granting credits (for example a Front End buyer who later buys the Bundle).
- [ ] Free-account protections from section 2, if a free plan is kept.
- [ ] DataForSEO balance alert or auto-recharge, minimum top-up $50.
- [ ] Delivery of the lifetime free hosting bonus.
- [ ] Run the free-trial test and replace the estimates in the credit table.
